Comprehensive Molecular Diagnostics for CML and MPN

Comprehensive CML and MPN molecular work-ups for a more informed patient status.

ABL1 Resistance Panel:

MPN Panel

Treatment

4 Breakpoint detection for broader coverage and **0.001% IS sensitivity** for superior diagnostics in initial work-ups and MRD monitoring.

For BCR::ABL1 positive patients, our ABL1 Resistance Panel detects ABL1 gene mutations associated with therapy resistance and early relapse.

For driver mutation status, including **co-expressions**, helping you make more informed treatment decisions that single gene reflex testing can miss.

CML/MPN Algorithm

(+) BCR-ABL1

(-) BCR-ABL1, Rule Out MPN

Efficient, Actionable Molecular Diagnostics for AML, CLL & Cytopenia

Cytopenia Panel:

Aid In CHIP & Early MDS Diagnosis/Prognosis From Peripheral Blood

Minimally invasive sampling to aid in the diagnosis and prognosis of **CHIP** and **early MDS**. **No bone marrow required**.

AML Panel:

Same-Day Panel Results to Guide Time-Sensitive Treatment Decisions

Therapeutic targets run in parallel for **rapid**, comprehensive molecular profiles that enable you to **determine the RIGHT treatment RIGHT away**.

CLL Panel:

Comprehensive Prognostic Insight

Prognostic panel to aid in patient treatment decisions from non-intervention to aggressive therapies.
